

The background of the slide is a photograph of industrial machinery. A large green machine with a yellow motor is the central focus, with a conveyor belt running alongside it. The scene is set in a factory or industrial environment. The image is partially obscured by a diagonal yellow and blue graphic element that runs from the top left to the bottom right.

Welcome To Master Corporation

Established : 2020

- Tyre Rasper
- Tyre Shredders
- Magnetic Separator
- Belt Conveyor
- Vibrating Screeners & Vibrating Feeders

About Us

Established in the year 2020, we started with our own manufacturing unit of Crumb Rubber. Gradually, we started increasing the efficiency of our Tyre Crumb line. 3 years in, we started fully focusing on providing and manufacturing best in industry machines. Our Industry Experience makes us the more favorable choice for your Tyre Recycling Needs. Check out our product range below.

Tyre Rasper

Tyre Rasps are medium speed machines that shredd 100-300mm big tyre chunks into small 20mm pieces to sell or for further size reduction in separate machines. Our robust design ensures long daily production hours and minimum downtime.

Tyre Shredders

Our Tyre Shredders are specifically designed to handle waste tyres. They can reduce Whole Tyres down to 100 mm length pieces in a single pass. They can be designed for virtually any required production volume. We can also customize the shredders for any other material.

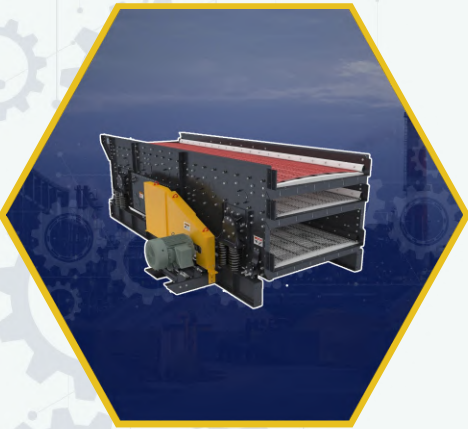

Magnetic Separator

Magnetic Separators are devices that are used to separate Ferrous materials from Non-Ferrous materials. They are very essential in mass production of food industry and recycling industry. Get in touch with us and let Master Corporation fulfill your requirements.

Vibrating Screeners & Vibrating Feeders

Vibrating Screeners are used to sort the bulk material into different sizes. They use wire mesh (single or multiple) to sort the materials into different sizes. Based on the materials to be sorted, they can be customized in many ways to meet the requirements.

Special Features of our Rasps

- **Water Cooling System:** Controllable flow system to fine tune the system. This cooling system ensures that the temperatures of the grinding chamber remain under control, thus preventing premature breakdown and failure.
- **Hydraulic Openable Chamber:** The Rasper chamber can be hydraulically opened facilitating easy and quick inspection and maintenance.
- **Efficient Dust Collector:** The Dust collection system we provide catches 90% of the dust and Nylon Fiber that gets liberated from tyres, and stores it in a jumbo bag for easy transfer.
- **Least Maintenance:** The Cutters of our Rasper are purposefully designed in a way that reduces their maintenance cost by 50% compared to our competitors.
